Real Estate CRM Solution Document

Pre-Sales and Sales Process Flow

Process definition, approvals, automations, notifications, and reporting requirements

Real Estate CRM Solution Document

Roles / Personas

1. Admin

Key Responsibilities

- Project, Tower, Unit, Milestone setup
- API configuration and integrations
- Round Robin configuration (Project-based)
- Bulk lead re-assignment and temporary assignment
- Lead merge approval
- User access and ownership control

System Capabilities

- Configure lead sources and campaigns
- Monitor data integrity (duplicates, assignments)
- Override ownership and availability
- View complete system-wide reports

2. Pre-Sales Executive

Key Responsibilities

- Handle new enquiries
- Follow-ups and re-engagement
- Site visit scheduling
- Lead qualification/unqualification
- Push qualified leads to Sales

System Capabilities

- Manual lead creation
- Lead status updates
- Follow-ups and site visits
- Read-only access after pushing to Sales

Real Estate CRM Solution Document

3. Sales Executive

Key Responsibilities

- Handle site visit completion
- Cost sheet creation and negotiation
- Unit blocking
- Booking initiation
- Push booking to CRM

System Capabilities

- Cost sheet & quote management
- Unit availability tracking
- Booking and receipt initiation
- Read-only booking access after CRM push

4. Sales Head / Manager

Key Responsibilities

- Approve cost sheets
- Lead re-assignment
- Team availability monitoring
- Escalation approvals

System Capabilities

- Cost sheet approval workflow
- Team performance monitoring
- Temporary/permanent lead ownership changes

5. GRE (Guest Relation Executive)

Key Responsibilities

- Handle walk-in customers
- Capture customer details at site
- Create leads and site visits instantly
- Assign leads to Sales Executives

Real Estate CRM Solution Document

System Capabilities

- On-site lead creation
- Immediate site visit completion
- Executive assignment (manual / round robin)

6. Channel Partner (No Logins in salesforce)

Key Responsibilities

- Register themselves
- Submit leads
- Bring customers to site

System Capabilities

- CP registration form
- Lead registration form
- Credit tracking (90 days)
- Email acknowledgements

7. CRM Executive

Key Responsibilities

- Post-booking processing
- Customer documentation
- Payment tracking
- Post-sales lifecycle

System Capabilities

- Booking ownership
- Demand and receipt tracking
- Customer communication

8. Finance Team

Key Responsibilities

- Receipt approvals
- Booking payment validation

System Capabilities

- Receipt approval workflow
- Partial and full payment tracking

Detailed process of each module

Project Management

Project Setup

- Admin can create a Project with all the details (fields added in the sheet).
- Admin can create Towers under a Project with all the details (fields added in the sheet).
- Admin can create/upload Units under a Project and Tower (fields added in the sheet).

Milestone Management

- Admin can create Construction Milestones and Payment Milestones under a Tower (fields added in the sheet).

Real Estate CRM Solution Document

Integration

Lead Push API

• The Fingertip team will provide a Lead Push API to push leads to Salesforce.
• In the API, we will have First Name, Last Name, Primary Mobile Number, Secondary Mobile Number, Primary Email, Secondary Email, Source, Sub Source, Campaign ID, Campaign Name, Interested Project, Property Type, BHK Type, Budget, and Remarks.
• This API can be used by all external sources to push leads to Salesforce.

Salesforce Lead Capture Integration

• Salesforce has an AppExchange product called **Lead Capture** to integrate with Meta and Google AdWords. We will install this app in the client's Salesforce org. This integration is managed by the product team (Lead Capture), and we cannot customize this.
• To test this API, we need Meta and Google account details with admin access.
• In Lead Capture, we can integrate forms (Meta and Google) one by one by mapping form fields with Salesforce fields.

Lead Storage and Automation

• This product works with the Salesforce standard Lead object, and all leads will first be stored in the standard Lead object.
• Since Ananda Homes will use Platform Licenses for users, the standard Lead object will not be available to users.
• We will have an automation workflow to push leads from the standard Lead object to a custom Lead object.

Channel Partner (CP) Integrations

• There will be one API to push CP Registration details (fields added in the sheet).
• There will be one API to push CP Lead details (fields added in the sheet).

Real Estate CRM Solution Document

Campaign Management

Campaign Creation and Configuration

• Admin can create a Campaign record by entering Campaign Name, Source, Sub Source, Start Date, End Date, and Status (Planned, Started, Hold, Completed, Cancelled).
• Admin can enter Budget and Spent Amount in the Campaign.
• The system will generate a unique Campaign ID for each Campaign record.

Campaign Lead Association

• When a lead comes with a Campaign ID from any source, that lead will be tagged to the Campaign.
• Any third-party system or source pushing leads to Salesforce through API should pass the Campaign ID if it is a campaign-related lead.
• Admin can view Campaign details and the leads generated from the Campaign.

Channel Partner Management

Channel Partner Registration

• Ananda Homes team will create the CP Registration form on their website or landing page.
• Fingertip team will provide an API to push new CP Registration details to Salesforce.
• CP Master will have details like CP Name, Contact Number, Email ID, etc.
• After submission, Admin will receive a notification.
• CP will receive a form submission acknowledgement email.

CP Approval Process

• Admin can review and approve or reject the request.
• CP will receive an approval or rejection email.
• If approved, CP will receive a CP ID (unique number) and a Lead Registration Form link (this will be developed by the Ananda Homes team; API will be provided by the Fingertip team to push the details to Salesforce).

Real Estate CRM Solution Document

CP Lead Registration

• CP can register their leads through the form by entering CP ID, CP Contact Number, and Lead details.
• After submission, the details will be pushed to Salesforce through API.

CP Validation and Duplication Logic

• Before saving the lead details, the system will first check whether the CP ID and CP Contact Number match. If not, it will send a response: *CP details not matching, please enter the correct CP ID and CP Contact Number*.
• If CP details match, the system will perform a duplication check. If a lead already exists with the same mobile number (Primary/Secondary), source is not CP, project is the same, and lead is Active (i.e., not marked as Unqualified, Lost, or Booked), it will be considered a duplicate, and the response will be: *Lead already exists, you will not get the credit*.
• If a lead already exists with the same mobile number (Primary/Secondary) but for a different project, it will be considered a new lead, and the response will be: *Lead registered successfully, you will have credit for 90 days (if the lead is not marked as Lost; after 90 days, you will not get the credit even if it is not marked as Lost), and you should bring the customer to the site*.
• If a lead already exists with the same mobile number (Primary/Secondary), source is another CP, project is the same, and the lead is Active (i.e., not marked as Unqualified, Lost, or Booked), the response will be: *Lead registered successfully, you will have credit for 90 days (if the lead is not marked as Lost; after 90 days, you will not get the credit even if it is not marked as Lost), and you should bring the customer to the site*.
• If a lead already exists with the same mobile number (Primary/Secondary) and same project, but the lead is marked as Lost, Unqualified, or Booked, the lead will be registered with the CP, and the response will be: *Lead registered successfully, you will have credit for 90 days (if the lead is not marked as Lost; after 90 days, you will not get the credit even if it is not marked as Lost), and you should bring the customer to the site*.

CP Lead Attribution and Tracking

• Every time a CP Lead is created in the system, the Source will be Channel Partner, Channel Partner Name will be the Sub Source, and the lead will be tagged to the CP.
• Even if it is a duplicate lead, the system will store the submission details under Enquiry Source or Related Source.
• If a lead already exists with the same mobile number (Primary/Secondary), source is the

same CP, project is the same, and the lead is Active (i.e., not marked as Unqualified, Lost, or Booked), the response will be: *Lead already exists with your name*.

Lead Management

Lead Sources

• Leads will come through APIs from digital sources.
• Leads will come from the CP form.
• Leads can be uploaded through the bulk uploader using a CSV file (Fingertip team will provide the template).
• Users can create leads manually.

Lead Status and Lifecycle

• Lead will have stages/status:
Pre-Sales Lead Status: New Enquiry, Follow-up, RNR, Site Visit Scheduled, Unqualified.
Sales Lead Status: Site Visit Scheduled, Site Visit Completed, Follow-up, Cost Sheet/Negotiation, Booked, Closed Lost.
• When lead status is Unqualified, Closed Lost, or Booked, it will be considered an inactive lead. Apart from these statuses, if the lead is in any other status, it will be considered an active lead.

Lead Fields

• Lead will have fields like Lead ID (Unique Number), Lead Name (First Name, Last Name), Primary Mobile Number, Secondary Mobile Number, Primary Email, Secondary Email, Interested Project, Lead Status, Property Type, BHK Type, Budget, Description, Lead Type (Fresh, Re-engaged, Re-opened).
• Primary Source, Primary Sub Source, Primary Campaign, Primary Channel Partner (if Primary Source is CP).
• Last Re-engaged Source, Last Re-engaged Sub Source, Last Re-engaged Campaign, Last Re-engaged Channel Partner (if Primary Source is CP).

Enquiry Source Creation

• Every time new leads come into the system, the system will create an Enquiry Source with Lead Name, Contact Details, and Interested Project.

Real Estate CRM Solution Document

Duplication Check

• Every time new leads come into the system, the system will check duplication. Duplication will work based on Contact (Mobile and Email, both Primary and Secondary) and Project Name.
• If an enquiry comes with the same mobile number and same project, it will be considered a duplicate lead, and the system will not create a new lead.

Existing Lead – Active

• If the lead already exists and is Active, the system will create a new Enquiry Source under the existing lead.
• In the Lead record, Lead Type will change to Re-engaged, and Last Re-engaged details will be updated (Last Re-engaged Source, Last Re-engaged Sub Source, Last Re-engaged Campaign, Last Re-engaged Channel Partner if Primary Source is CP).

Existing Lead – Inactive

• If the lead already exists but is Inactive, the system will create a new Enquiry Source under the existing lead.
• In the Lead record, Lead Type will change to Re-opened.
• Primary Source and Last Re-engaged details will be updated (Source, Sub Source, Campaign, Channel Partner if Primary Source is CP).
• The lead will be assigned to a Pre-Sales Executive based on the defined round-robin.

New Lead Creation

• If the lead does not exist in the system, the system will create a new lead and create a new Enquiry Source under the newly created lead.
• Lead Type will be Fresh.
• Primary Source and Last Re-engaged details will be the same, as it is a fresh lead.
• The lead will be assigned to a Pre-Sales Executive based on the defined round-robin.

Notifications

• Every time a lead is re-engaged, the currently assigned executive will receive a Re-engagement Notification (“Your lead got re-engaged”), and the Last Re-engagement Date will be updated with the current date.
• Every time a lead is re-opened, the newly assigned executive will receive a New Lead

Assignment Notification, and the Last Lead Re-opened Date will be updated with the current date. The newly assigned executive can view all previous history.

Round Robin Configuration

• Round Robin can be configured by Admin.
• Round Robin will work based on Project.
• Admin can select, mark it as active, and save; then under Round Robin, Admin will add Round Robin members.
• Round Robin member will have User Name (search and select), User Type (Pre-Sales, Sales, CRM), and Active (checkbox).

Pre-Sales Executive Activities

Executive Availability

• Pre-Sales Executives can mark themselves as Available or Not Available with a reason from the Home tab.

Pre-Sales Lead Status

• Pre-Sales Lead Status: New Enquiry, Follow-up, RNR, Site Visit Scheduled, Unqualified.

Lead Assignment

• The system will assign leads to Pre-Sales Executives based on round robin, and executives will receive a new lead assignment notification.
• If a Pre-Sales Executive creates a manual lead, the lead will be assigned to the same executive. Manual lead creation will have fields: First Name, Last Name, Source, Sub Source, Primary Mobile, Secondary Phone, Primary Email, Secondary Email, Property Type, BHK Type, Budget, Description.

Lead Visibility and List Views

• Pre-Sales Executives can see all assigned leads as a list under the Lead tab.
• Leads can be filtered using admin-created list views (Today’s New Leads, Follow-up Leads, Today’s Re-engaged Leads, This Week Created Leads, Site Visit Scheduled Leads).

Real Estate CRM Solution Document

Lead Details Page

• Executives can open a lead and view full lead details.
• Lead Detail page will have all lead fields, Enquiry Sources, Follow-ups, Site Visit Schedules, and Field Update History.
• Lead Detail page will have buttons: Lead Status Update and Push to Sales.

Follow-ups and Notes

• Executives can update notes under the lead and can create follow-ups with Subject and Due Date.
• Follow-ups created will be assigned to the same executive.

Lead Status Update

• Executives can update lead status from the Lead Status field or the Lead Status Update button.
• Through field update, they can update status only.
• If an executive updates the status using the Lead Status Update button, required fields will change in the popup based on the selected status.
• If lead status changes to Follow-up or RNR: Follow-up Subject and Follow-up Due Date are required.
• If lead status changes to Site Visit Scheduled: Project (auto-populated from the lead) and Site Visit Scheduled Date are required.
• If lead status changes to Unqualified: Unqualified/Closed Lost Reason (picklist) is required. After marking as Unqualified, the lead will be re-assigned to Admin.

Site Visit Management

• Executives can create a site visit by clicking the New button with Project, Schedule Date, Visit Type, Source Type (Digital – Own Source or CP), and CP Name (if Source Type is CP). The site visit will be assigned to the same executive.
• If the customer is not interested, the lead will be marked as Unqualified with a reason, and scheduled follow-ups and site visits will be changed to Cancelled.
• If the customer is interested, the lead will be pushed to Sales by clicking the Push to Sales button.

Real Estate CRM Solution Document

Push to Sales

• When a lead is pushed, the Lead Owner will change to a Sales Executive based on round robin, and the Sales Executive will receive a new lead assignment notification.
• When a lead is pushed, any scheduled follow-ups or site visits will be re-assigned to the Sales Executive.
• After the lead is pushed to Sales, the Pre-Sales Executive will have access to the lead with read-only permission (they cannot edit).

Duplicate Lead and Merge Process

• If the same customer enquires using two different mobile numbers for the same project, the system will create two new leads and assign them to different executives based on round robin.
• In this case, if an executive wants to merge leads, they can approach Admin or Manager for lead merge.
• There will be a Lead Merge button for Admin or Manager. When clicked from the lead that needs to be merged, the system will prompt for Merge Lead and ask to select the Actual Lead (search and select).
• After merge, all Enquiry Sources, Follow-ups (owner will be the actual lead owner), and Site Visits (owner will be the actual lead owner) will be transferred to the actual lead. The merged lead will be deleted from the system.
• Lead merge logic will be the same for Sales as well.

Lead Re-assignment

• For any reason, if Admin or Manager wants to re-assign a lead to another executive, they can do so by clicking the Change Owner button. The newly assigned executive will receive a lead assignment notification.
• If it is a bulk re-assignment, Admin can export leads that need to be re-assigned from reports with Lead Record ID, update the Lead Owner ID (new executive ID), and upload it back into the system using a CSV file.

Sales Executive Flow

Executive Availability

• Pre-Sales Executives can mark themselves as Available or Not Available with a reason from the Home tab.

Real Estate CRM Solution Document

Sales Lead Status

• Sales Lead Status: Site Visit Scheduled, Site Visit Completed, Follow-up, Cost Sheet/Negotiation, Booked, Closed Lost.

Lead Assignment and Visibility

• The system will assign leads to Sales Executives based on round robin, and executives will receive a new lead assignment notification.
• Sales Executives can see all assigned leads as a list under the Lead tab.
• Leads can be filtered using admin-created list views (Today's New Leads, Follow-up Leads, Today's Re-engaged Leads, This Week Created Leads, Site Visit Scheduled Leads, Site Visit Completed Leads, Cost Sheet/Negotiation Leads, Booked Leads).

Lead Details Page

• Executives can open a lead and view full lead details.
• Lead Detail page will have all lead fields, Enquiry Sources, Follow-ups, Site Visit Schedules, Field Update History, Cost Sheets/Quotes, and Project Board (Project names with units count; after selecting a project, units with size, facing, unit type, and status).
• Lead Detail page will have buttons: Lead Status Update and New Cost Sheet.

Notes, Follow-ups, and Status Updates

• Executives can update notes under the lead and create follow-ups with Subject and Due Date.
• Executives can update status from the Lead Status field or the Lead Status Update button.
• Through field update, they can update status only.
• If an executive updates the status using the Lead Status Update button, required fields will change in the popup based on the selected status.
• If lead status changes to Follow-up: Follow-up Subject and Follow-up Due Date are required.
• If lead status changes to Site Visit Completed: Completed Date and Feedback are required.
• If lead status changes to Cost Sheet/Negotiation: New Cost Sheet button will be shown.
• If lead status changes to Booked: A message will be shown — "Please create booking from approved cost sheet."
• If lead status changes to Closed Lost: Unqualified/Closed Lost Reason (picklist) is required. After marking as Closed Lost, the lead will be re-assigned to Admin.

Real Estate CRM Solution Document

Site Visit Management

• Executives can create a site visit by clicking the New button with Project, Schedule Date, Visit Type, Source Type (Digital – Own Source or CP), and CP Name (if Source Type is CP). The site visit will be assigned to the same executive.
• Executives can update site visit status as Completed, Cancelled, or Rescheduled by opening the site visit record.

Cost Sheet Creation and Approval

• Executives can create a new Cost Sheet by clicking the New button.
• In the New Cost Sheet popup, the system will ask for Unit Number (search and select; only available units will be shown in search results). Once the executive selects a unit, the system will fetch the unit details.
• Executives can enter Discount per Sqft, and the discount value will be calculated automatically.
• Executives can select Payment Milestone Type (Standard or Custom).
• If Standard is selected, the system will fetch master payment milestones from the selected Unit-Tower.
• If Custom is selected, users can enter Milestone Name, Payment Percentage, Amount, Payment Due Date, Construction Milestone, and Status (Planned, Demanded, Partial Received, Received).
• After filling or selecting payment milestones, executives can save the Cost Sheet. It will be triggered for approval if there is any discount or if the payment type is Custom.

Approval Workflow

• Manager will receive an approval notification and will review the Cost Sheet with milestones.
• Manager can approve or reject; in both cases, the executive will receive a notification. If the manager feels Sales Head approval is required, they can re-assign the approval to their manager.
• After approval, or if no approval is required (standard price and standard payment milestones), the executive will get an option to export the Cost Sheet PDF and send it to the customer via email (download option will also be available).
• If the manager rejects or the customer does not accept, the executive can create a new Cost Sheet using the same process.

Real Estate CRM Solution Document

Cost Sheet Status

• Cost Sheet Status: Draft, Submitted, Approved, Rejected, Accepted by Customer, Denied by Customer.

Booking Process

• If the customer accepts, the executive will get an option to create a Booking from the approved and accepted Cost Sheet.
• Executives can block the unit from the accepted Cost Sheet by clicking the Block Unit button.
• The system will create a Unit Block record with Unit Number, Executive Name, Lead, Cost Sheet, and Auto Unblock Date (maximum block days will be defined at the project level).
• After blocking, the Unit Master status will change to Blocked, with Blocked By Lead (Lookup to Lead) and Block Expiry Date populated.
• Every day in the morning, the system will run a scheduled job to check the Block Expiry Date and unblock the unit (status changed to Available), and the blocked executive will receive a notification.

Booking Creation and Approval

• Once the user clicks the New Booking button, a popup will open. The system will check whether the unit is available or blocked by another executive.
• New Booking popup will have Lead Details (not editable), Cost Details (not editable), Applicant Details (editable), and Booking Amount Details (editable – Booking Amount, Payment Mode, Reference Number).
• After saving the booking, the system will create Booking, Receipt, and Co-Applicant records.
• Booking will go for Sales Head approval, and Receipt will go for Finance approval in parallel.
• If the executive receives a partial booking amount (minimum booking amount will be defined at the project level), they can create receipts for the remaining amount, and it will go for approval.
• After receiving the full booking amount and approval from the Finance team, the Sales team can push the Booking to CRM by clicking the Push to CRM button.

Handover to CRM

• Booking will be assigned to a CRM Executive based on round robin, and the CRM Executive will receive a notification.
• Sales Executives will have read-only access to the Booking after pushing it to CRM.

Real Estate CRM Solution Document

GRE Flow

GRE Assignment

• In every project site, there will be one GRE Executive.

Customer Walk-in Handling

• Once a customer visits the site, the GRE will ask for the customer's phone number and source (Direct Walk-in, Digital – Own Source, CP Name if it is CP).
• After entering these details along with the project name, the system will check whether an active lead exists or not.

New Lead Creation

• If there is no lead, the system will ask for all details to create a lead (Name, Contact, Source, Preferences).
• GRE will have an option to assign the lead to a specific executive by selecting the name, or they can select the round robin checkbox for round robin assignment (available Sales Executives).
• Under the newly created lead, the system will create one Site Visit with Scheduled Date and Completed Date as the same, and status as Completed. This Site Visit will also be assigned to the same Sales Executive.

Existing Active Lead Handling

• If an active lead exists and an Enquiry Source also exists (Enquiry Source should be with the same source – Digital or CP – and the created date should be after the last re-opened date or created date, whichever is most recent) with the same selected source, then the system will check whether a Site Visit is already scheduled with the same source.
• If a Site Visit exists, the same Site Visit status will be changed to Completed. If there is no Site Visit scheduled, it will be created and marked as Completed.
• If an active lead exists but there is no Enquiry Source with the selected source, then the system will create one Enquiry Source and then create one Site Visit with the source and mark it as Completed.

Real Estate CRM Solution Document

Inactive Lead Handling

• If the lead exists but is not active, then the system will create a new Enquiry Source and a new Site Visit.

Bulk Lead Re-assignment / Temporary Owner Assignment

Re-assignment Access

• Admin or Manager will have a Bulk Re-assignment tab.
• After clicking the tab, there will be two sub-tabs: New Re-assignment and Temporary Assignment.

New Re-assignment Setup

• If it is a new re-assignment, the system will ask for Re-assignment Type (Permanent or Temporary), Current Lead Owner, New Lead Owner, Temporary Assignment Expiry Date (if it is Temporary), and Re-assignment Reason.
• Based on the Current Lead Owner, leads will be displayed, with options to filter records by Created Date, Status, and Project.

Lead Selection and Re-assignment

• Users can select leads (checkbox) and click Re-assign. The system will create Re-assignment records, update the lead, and share access.

Temporary Assignment Handling

• If it is a Temporary Assignment, the Lead Owner will remain the current owner, but there will be one more field: Temporary Owner.
• Temporary Owner will get full access to the lead until the Temporary Assignment Expiry Date.
• Every day in the morning, the system will run a scheduled job to check Temporary Assignment Expiry and remove access from the Temporary Owner.

Re-assignment Record Details

• Re-assignment record will have fields: Status (Access Active or Access Removed), Lead, Created Date (Assigned On), Temporary Assignment Expiry Date, Temporary User/Owner, Assigned By, Access Removed By, and Access Removed Date.

Permanent Re-assignment

• If it is a Permanent Re-assignment, the Lead Owner itself will change.

Temporary Assignment Monitoring

• Admin or Manager can view Temporary Assignments and remove access by selecting records and updating them.

Manager Functionalities

Availability Management

• Manager can view subordinates with available status.
• Manager can also change available status on behalf of their subordinates.
• The system will maintain a track of available status changes.

Lead Re-assignment

• Manager can re-assign leads to other users with a reason.
